Brief notes on how to enable this for a product using metafields:

Already I show how I enabled the custom note metafields on the video, here I will give you the steps I followed.

In the Shopify Admin side, in setting I went to the Metafields and metaobjects, then I went to the products, then I choose add definition, then I added the name and the type Boolean True/False.

Name: Allow Message

Namespace & key: custom.allow_message

Type: true/false

On the product editing page, I toggled the metafiels ON, to enable the message field appear to the customers.

Thanks,

Anfal Eltahir
